SUMMARY

Data Engineer with 5+ years of experience building production batch and streaming pipelines across AWS and GCP. Skilled in Python, SQL, PostgreSQL, Kinesis Data Firehose, Apache Iceberg, Spark, Airflow, data modeling, and automated data-quality controls. Delivered pipelines processing 100 GB per day, optimized 2 TB datasets, and reduced pipeline runtime by 50%.

EXPERIENCE

Allied Universal September 2026 - Present

Data Engineer *Irvine, CA*

- Engineered an end-to-end streaming pipeline processing 1,000+ events per day from Amazon Kinesis Data Firehose into Apache Iceberg, delivering partitioned data for analytics and AI workloads.
- Built production data pipelines for the LISA platform and integrated 15 ADP API endpoints, supporting the Netherlands deployment across 170+ business units.
- Analyzed 300 million scheduling records to identify thousands of overlapping shifts and developed remediation rules that reduced scheduling-data exceptions by 20%.
- Containerized Kinesis development and deployment with Docker and GitLab CI/CD, reducing deployment time from 30 to 5 minutes; implemented Datadog and Lens monitoring that reduced incident detection and resolution time by 85%.

Liferay August 2021 - September 2026

Senior Data Engineer | January 2025 - September 2026 *Diamond Bar, CA*

- Engineered production ELT pipelines on GCP ingesting 100 GB per day from distributed source systems; implemented incremental loads, schema validation, and automated quality checks to improve data availability and reliability.
- Modernized legacy Matillion ETL by migrating orchestration to Cloud Composer and building reusable Python Airflow operators, eliminating on-premises compute costs and saving $70K annually.
- Optimized Apache Spark and Dataproc pipelines through dynamic partitioning, parallel API extraction, and adaptive batch sizing, reducing runtime by 50% while improving operational monitoring.
- Built a BigQuery Model Context Protocol (MCP) server that provided company-wide access to approved data and accelerated AI-assisted self-service analytics.

Data Engineer | July 2022 - January 2025

- Introduced the team's first dbt data-quality pipeline for critical Salesforce integrations, automating tests for data loss, corruption, and sync failures with Slack and email alerts to reduce SLA-breach risk.
- Replaced inaccurate bot-classification logic with an official IAB-based pipeline, enabling Sales and Billing teams to recapture $2M in lost revenue.

Associate Data Engineer | August 2021 - July 2022

- Streamlined customer-usage data pipelines, enabling pricing-strategy improvements that contributed to a 35% revenue increase.

Tesla June 2020 - September 2020

Data Analytics & Engineering Intern *Palo Alto, CA*

- Automated Python pipelines to clean and integrate energy-infrastructure datasets, improving processing efficiency by 10%; built Tableau dashboards with 3,000 company-wide views.

TECHNICAL SKILLS

Languages: Python, SQL, Java, Shell Scripting, R

Data Engineering: Streaming and Batch Pipelines, ETL/ELT, Apache Iceberg, Amazon Kinesis Data Firehose, Apache Spark, Apache Airflow, dbt, Data Modeling, Data Quality, API Integration

Cloud & Databases: AWS, GCP, PostgreSQL, BigQuery, Dataproc, Cloud Composer, Google Cloud Storage, MySQL, MongoDB, Redis

Platform & Delivery: GitLab, GitLab CI/CD, Docker, Kubernetes, Lens, Terraform, Datadog, Git/GitHub, pytest, Jenkins

Analytics & Tools: Domo, Tableau, Looker Studio, Excel, Jupyter, Matplotlib, JIRA

EDUCATION

University of California, San Diego September 2017 - June 2021

Bachelor of Science in Data Science; GPA: 3.51; Dean's List, Provost Honors La Jolla, CA
